

# Chapter 1

## 1. Creating Object

```
<html>
<body>
  <script>
    // Method 1: Single object using object literal
    var student = {
      name : "Ram",
      marks : 99
    };

    // Method 2: Using new key word, using instance of Object
    var emp = new Object();
    emp.name = "Sham";
    emp.salary = 100000;

    // Method 3: Using object constructor
    function car(brand,color){
      this.brand = brand;
      this.color = color;
    }
    c = new car("Audi","Black");
  </script>
</body>
</html>
```

## 2. Display the current date and time

```
<html>

<body>

<script>

    var d = new Date();

    var y = d.getFullYear();

    var m = d.getMonth() + 1;

    var dd = d.getDay() + 1;

    var h = d.getHours() + 1;

    var m = d.getMinutes() + 1;

    var s = d.getSeconds() + 1;

    document.write("Current date : " + dd + "/" + m + "/" + y);

    document.write("<br>Current time : " + h + ":" + m + ":" + s);

</script>

</body>

</html>
```

**Output :**

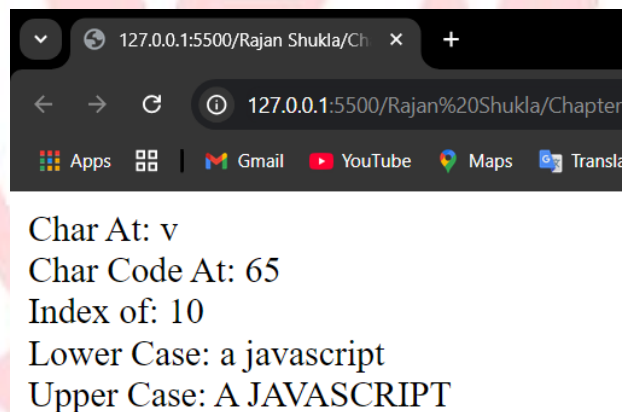

Current date : 4/29/2024  
Current time : 3:29:20

### 3. String Methods

```
<html>
<body>
<script>
  var str = "A JavaScript";
  document.write("Char At: " + str.charAt(4)+"<br>");
  document.write("Char Code At: " + str.charCodeAt(0)+"<br>");
  document.write("Index of: " + str.indexOf("p")+"<br>");
  document.write("Lower Case: " + str.toLowerCase()+"<br>");
  document.write("Upper Case: " + str.toUpperCase()+"<br>");
</script>
</body>
</html>
```

### Output :

## 4. Simple calculator

```
<html>
<body>
<script>
    var num1 = parseInt(prompt("Enter number 1 : "));
    var num2 = parseInt(prompt("Enter number 2 : "));
    var option = prompt("Enter operation to perform (ex. +,-,*,/) : ");

    switch(option){
        case "+" : alert(num1 + num2);
        break;
        case "-" : alert(num1 - num2);
        break;
        case "/" : alert(num1 / num2);
        break;
        case "*" : alert(num1 * num2);
        break;
    }
</script>
</body>
</html>
```

**Output :**

**// alert box according to enter fields //**

## **5. Getters and setters :**

```
<html>
<body>
  <script>
    var car = {
      Defbrand : "Audi",
      //getter
      get brand(){
        return this.Defbrand;
      },
      // setters
      set brand(value){
        this.Defbrand = value;
      },
    };
    //Getter
    document.write("Brand : " + car.Defbrand);
    //setter
    car.brand = "Maruti";
    document.write("<br>Brand : " + car.Defbrand);
  </script>
</body>
</html>
```

### Output :

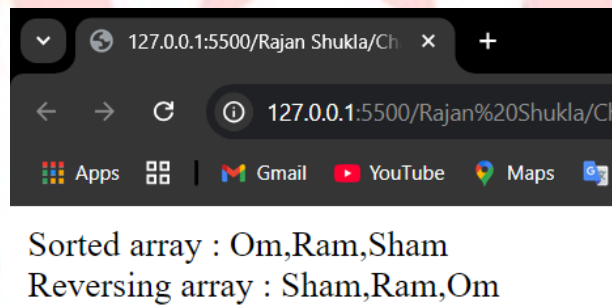

Brand : Audi  
Brand : Maruti

## Chapter 2

### 1. Sorting and reversing array

```
<html>
<body>
  <script>
    var arr = new Array("Ram","Sham","Om");
    document.write("Sorted array : " + arr.sort());
    document.write("<br>Reversing array : " + arr.reverse());
  </script>
</body>
</html>
```

#### Output :

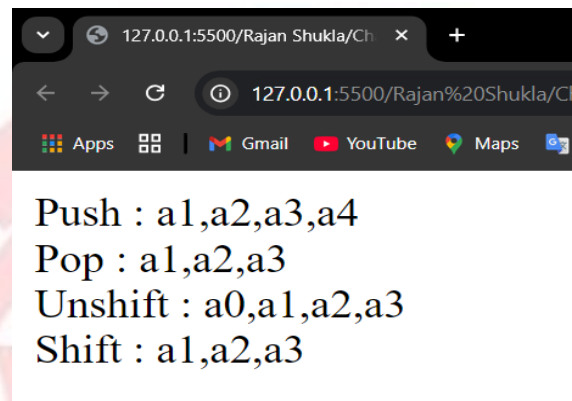

### 2. Adding and removing elements from array

```
<html>
<body>
  <script>
    var arr = new Array("a1","a2","a3");
    arr.push("a4");
    document.write("Push : " + arr);
    arr.pop();
    document.write("<br>Pop : " + arr);
```

```
arr.unshift("a0");  
document.write("<br>Unshift : " + arr);  
arr.shift();  
document.write("<br>Shift : " + arr);  
</script>  
</body>  
</html>
```

### Output :

### 3. Calling function from HTML

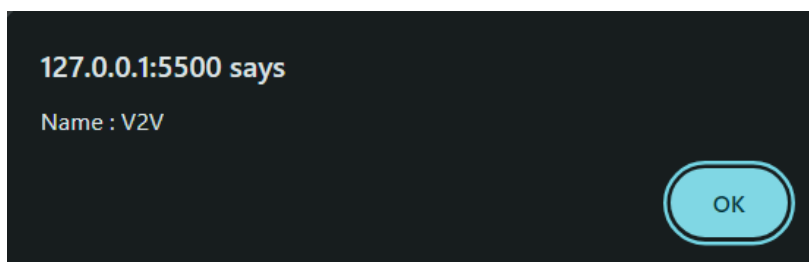

```
<html>  
<head>  
  <script>  
    function welcome(){  
      alert("welcome");  
    }  
    function bye(){  
      alert("bye");  
    }  
  </script>  
</head>  
<body onload="welcome()" onunload="bye()">  
</body>  
</html>
```

## Chapter 3

### 1. Display input contents

```
<html>
<head>
  <script>
    function show(){
      var name = document.getElementById("demo").value;
      alert("Name : " + name);
    }
  </script>
</head>
<body>
  Enter name : <input type="text" id="demo"><br>
  <button onclick="show()">show</button>
</body>
</html>
```

#### Output :

## 2. Changing style of contents/ elements

(Changing color of text of <p> tag and its background )

```
<html>

<head>

  <script>

    function change(){

      var x = document.getElementsByTagName("p");

      var i;

      for(i=0;i<x.length;i++){

        x[i].style.color = "red";

        x[i].style.backgroundColor = "Pink";

      }

    }

  </script>

</head>

<body>

  <p>V2V</p>

  <p>Best for diploma</p>

  <button onclick="change()">Change</button>

</body>

</html>
```

**Output :**

V2V

Best for diploma

Change

V2V

Best for diploma

Change

### 3. Changing inner text

```
<html>
<head>
  <script>
    function load(){
      document.getElementById("demo").innerHTML = "This text is added dynamically";
    }
  </script>
</head>
<body onload="load()">
  <p id="demo"></p>
</body>
</html>
```

**Output :**

This text is added dynamically

#### 4. All elements of in form

```
<html>
```

```
<body>
```

```
<form>
```

Enter your name : `<input type="text"><br><br>`

Select gender :

```
<input type="radio" name="grp1" checked="true"> Male
```

```
<input type="radio" name="grp1"> Female
```

```
<br><br>
```

Select colors :

```
<input type="checkbox" name="grp2" checked="true"> Red
```

```
<input type="checkbox" name="grp2"> White
```

```
<input type="checkbox" name="grp2"> Black
```

```
<input type="checkbox" name="grp2"> Yellow
```

```
<br><br>
```

Enter address : `<br>`

```
<textarea rows="10" cols="30"></textarea>
```

```
<br><br>
```

Select City :

```
<select>
```

```
<option value="1">Badlapur</option>
```

```
<option value="2">Kalyan</option>
```

```
<option value="3">Thane</option>
```

```
</select>
```

```
<br><br>
```

```
<input type="submit" value="Submit">
```

```
</form>
```

```
</body>
```

```
</html>
```

**Output :**

Enter your name :

Select gender : ☒ Male ☐ Female

Select colors : ☒ Red ☐ White ☐ Black ☐ Yellow

Enter address :

Select City :

## 5. Mouse events

```
<html>
```

```
<body>
```

```
<textarea onmouseover="this.value='Mouse in'" onmouseout="this.value='Mouse out'"></textarea>
```

```
</body>
```

```
</html>
```

**Output :**

## 6. Key events

```
<html>
```

```
<body>
```

```
    Enter name : <input type="text" onkeydown="javascript:alert('Key down')"  
onkeyup="javascript:alert('Key up')">
```

```
</body>
```

```
</html>
```

**Output :**

## 7. Changing option list dynamically

```
<html>
```

```
<head>
```

```
<script>
```

```
    function Change(EventCode){  
        with(document.forms.myform){  
            if(EventCode == 1){  
                OptionList[0].value = 1;
```

```
OptionList[0].text = "Apple";  
OptionList[1].value = 2;  
OptionList[1].text = "Banana";  
OptionList[2].value = 3;  
OptionList[2].text = "Kiwi";  
}
```

```
if(EventCode == 2){  
    OptionList[0].value = 1;  
    OptionList[0].text = "Lotus";  
    OptionList[1].value = 2;  
    OptionList[1].text = "Rose";  
    OptionList[2].value = 3;  
    OptionList[2].text = "Mogra";  
}
```

```
}
```

```
}
```

```
</script>
```

```
</head>
```

```
<body>
```

```
<form name="myform">
```

```
<select name="OptionList" size="2">
```

```
<option value="1">Apple</option>
```

```
<option value="2">Banana</option>
```

```
<option value="3">Kiwi</option>
```

```
</select>
```

```
<br><br>
```

```
<input type="radio" value="1" name="grp1" onclick="Change(this.value)"> Fruits
```

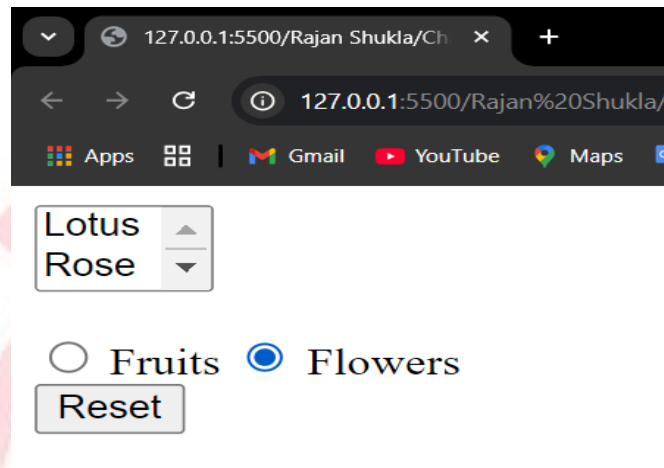

```
<input type="radio" value="2" name="grp1" onclick="Change(this.value)"> Flowers
```

```
<br>
```

```
<input type="reset">
```

```
</form>
</body>
</html>
```

### Output :

### 8. Enable and disable text field

```
<html>
<head>
  <script>
    function change(){
      var x = document.getElementById("demo");
      x.disabled = false;
    }

    function noChange(){
      var x = document.getElementById("demo");
      x.disabled = true;
    }
  </script>
</head>
<body>
```

```
Enter name : <input type="text" id="demo">  
<br><br>  
<button onclick="change()">Enable</button>  
<button onclick="noChange()">Disable</button>  
</body>  
</html>
```

**Output :**

## Chapter 4

### 1. Set, Get, Delete, and Display Cookies

```
<html>
<head>
  <title>Cookie Manager</title>
  <script>
    function setCookie() {
      document.cookie = "myCookie=myValue;path=/";
    }

    function getCookie() {
      var x = document.cookie;
      alert(x);
    }

    function deleteCookie() {
      // Also for setting expiration date
      document.cookie = "myCookie=; expires=Thu, 01 Jan 1970 00:00:00 UTC; path=/";
    }

    function displayCookies() {
      alert("All Cookies: " + document.cookie);
    }
  </script>
</head>
<body>
  <button onclick="setCookie()">Set Cookie</button>
  <button onclick="getCookie()">Get Cookie</button>
  <button onclick="deleteCookie()">Delete Cookie</button>
  <button onclick="displayCookies()">Display Cookies</button>
```

</body>

</html>

**Output :**

## 2. Display value and changing color of textbox

<html>

<head>

<script>

```
function change(){
    var x = document.getElementById("name");
    x.style.backgroundColor = "red";
    alert(x.value);
}
```

</script>

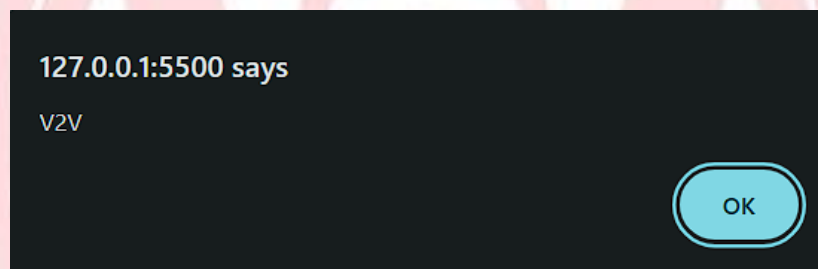

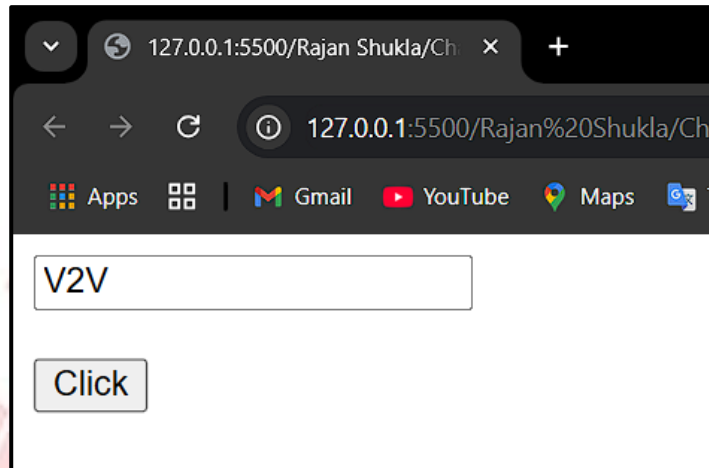

</head>

<body>

<input type="text" id="name">

```
<br><br>  
<button onclick="change()">Click</button>  
  
</body>  
</html>
```

## Output :

### 3. Opening and Closing window

```
<html>
<head>
  <title>Open and Close Window</title>
  <script>
    var newWindow;
    function openWin() {
      newWindow = window.open("", "", "width=200,height=100,left=100,top=200");
    }
    function closeWin() {
      newWindow.close();
    }
  </script>
</head>
<body>
  <button onclick="openWin()">Open Window</button>
  <button onclick="closeWin()">Close Window</button>
</body>
</html>
```

**Output :**

Open Window

Close Window

#### 4. scrollBy() scrollTo() moveBy() moveTo()

```
<html>
<head>
  <title>Window Operations Example</title>
  <script>
    var newWindow;

    function openNewWindow() {
      newWindow = window.open("", "", "width=200,height=200");
      newWindow.document.write("<div style='height: 1500px;'>Scroll and move this window</div>");
    }

    function scrollNewWindow() {
      newWindow.scrollBy(0, 100);
    }

    function scrollToNewWindow() {
      newWindow.scrollTo(0, 600);
    }

    function moveNewWindow() {
      newWindow.moveBy(150, 150);
```

```
}

function moveToNewWindow() {
    newWindow.moveTo(300, 200);
}

</script>
</head>
<body onload="openNewWindow()">
    <button onclick="scrollNewWindow()">Scroll By 100px</button>
    <button onclick="scrollToNewWindow()">Scroll To 600px</button>
    <button onclick="moveNewWindow()">Move By 150px</button>
    <button onclick="moveToNewWindow()">Move To (300, 200)</button>
</body>
</html>
```

## Output :

## 5. Opening multiple windows

```
<html>
<head>
  <title>Window</title>
  <script>
    function show() {
      for (let i = 0; i < 250; i += 50) {
        window.open("", "", 'top=' + (i + 50) + ',width=300,height=200');
      }
    }
  </script>
</head>
<body>
  <button onclick="show()">Show Multiple Windows</button>
</body>
</html>
```

### Output :

```
V2V");

fun1(){
setTimeout(message,1000);

fun2(){
meout(msg);
```

Buy Ty Diploma Buy Sy Diploma Whatsapp Group for Study Material

```
}  
  
function fun3(){  
    msg = setInterval(message,2000);  
}  
  
function fun4(){  
    clearInterval(msg);  
}  
  
</script>  
</head>  
<body>  
    <button onclick="fun1()">setTimeout</button>  
    <button onclick="fun2()">clearTimeout</button>  
    <button onclick="fun3()">setInterval</button>  
    <button onclick="fun4()">clearInterval</button>  
</body>  
</html>
```

## Output :

127.0.0.1:5500 says

V2V

OK

## Chapter 5

### 1. Modifiers

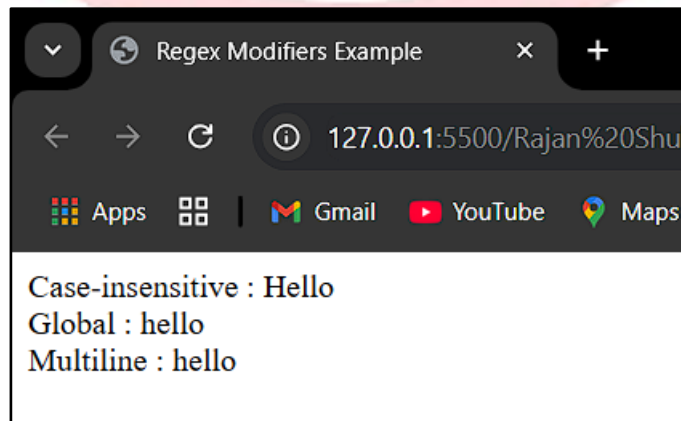

```
<html>
<head>
  <title>Regex Modifiers Example</title>
</head>
<body>
  <script>
    var text = "Hello World\nhello world\nHELLO WORLD";

    document.write("Case-insensitive : " + text.match(/hello/i) + "<br>");

    document.write("Global : " + text.match(/hello/g) + "<br>");

    document.write("Multiline : " + text.match(/hello/m) + "<br>");
  </script>
</body>
</html>
```

#### Output :

## 2. Quantifiers'

```
<html>
<head>
  <title>Quantifiers</title>
</head>
<body>
  <script>
    var str = "100 1000 or 10000";
    document.write("<br>+ (one or more) = " + (/1+/.test(str));

    document.write("<br>* (zero more more) = " + (/2*/.test(str));

    document.write("<br>? (only zero or one) = " + (/1?/.test(str));

    document.write("<br>{N} (only N times in sequence) = " + (/0{8}/.test(str));

    document.write("<br>{2,3} (only 2 or 3 times in sequence) = " + (/0{2,3}/.test(str));

    document.write("<br>{2,} (2 or more times in sequence) = " + (/1{2,}/.test(str));

    document.write("<br>$ (at end) = " + (/0$/).test(str));

    document.write("<br>^ (at beginning) = " + (/^0/).test(str));

  </script>
</body>
</html>
```

## Output :

### 3. Matching digits and words

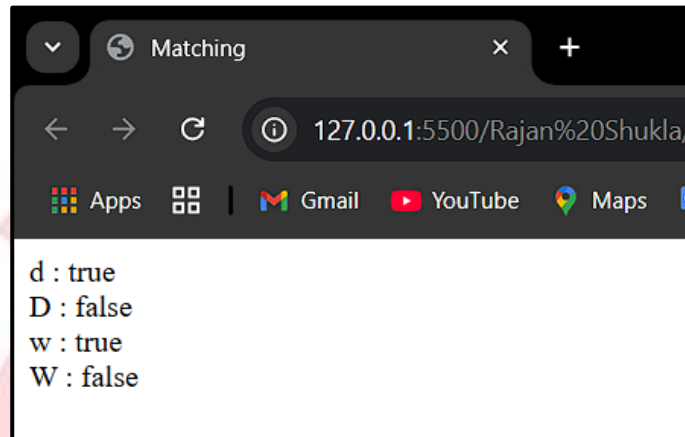

```
<html>
<head>
  <title>Matching</title>
</head>
<body>
  <script>
    var digit = "123";
    var p = ",|{}";
    var word = "hello";

    //digit
    document.write("\d : " + (/d/).test(digit));
    document.write("<br>\D : " + (/D/).test(digit));

    //Word
    document.write("<br>\w : " + (/w/).test(word));
```

```
document.write("<br>\W : " + (/\\W/).test(word));  
  
</script>  
  
</body>  
  
</html>
```

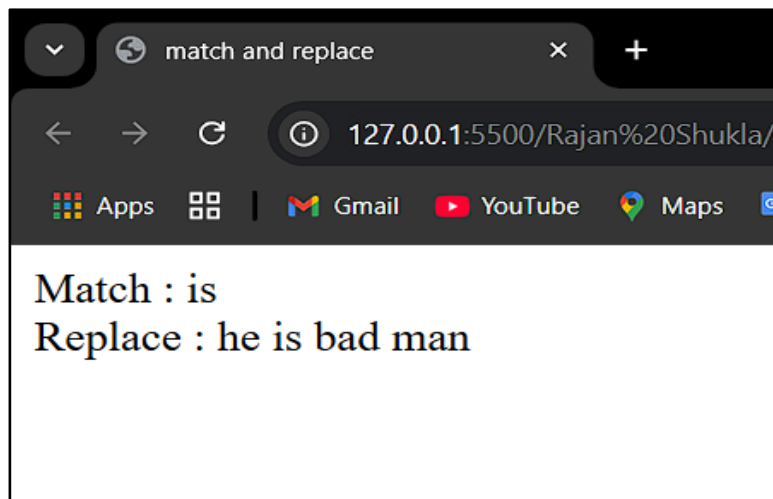

## Output :

## 4. Match and Replace

```
<html>  
  
<head>  
  <title>match and replace</title>  
</head>  
  
<body>  
  <script>  
    var str = "he is good man";  
    document.write("Match : " + str.match(/is/));  
    document.write("<br>Replace : " + str.replace(/good/g,"bad"));  
  </script>  
</body>  
  
</html>
```

## Output :

## 5. Calling function of child window

frame1.html

```
<html>
  <body>
    <button onclick="parent.frame2.show()">Show</button>
  </body>
</html>
```

Frame2.html

```
<html>
  <body>
    frame 2
    <script>
      function show(){
        alert("hii");
      }
    </script>
  </body>
</html>
```

Frame.html

```
<html>

  <frameset rows="50%,50%">

    <frame src="frame1.html">

    <frame src="frame2.html" name="frame2">

  </frameset>

</html>
```

**Output :**

## 6. changing content of child window

frame1.html

```
<html>

  <body>

    <button onclick="parent.frame2.show()">Show</button>

  </body>

</html>
```

Frame2.html

```
<html>
```

```
<body>
  frame 2
  <script>
    function show(){
      parent.frame2.location.href = "frame3.html";
    }
  </script>
</body>
</html>
```

frame3.html

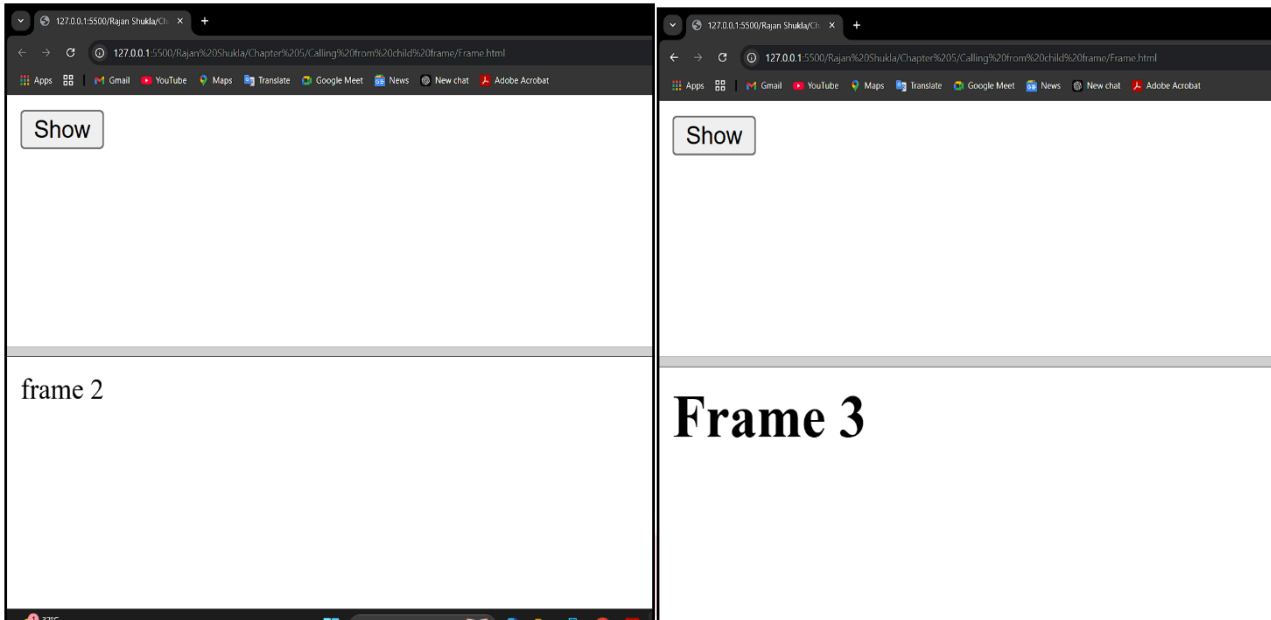

```
<html>
  <body>
    <h1>Frame 3</h1>
  </body>
</html>
```

Frame.html

```
<html>
  <frameset rows="50%,50%">
    <frame src="frame1.html">
    <frame src="frame2.html" name="frame2">
  </frameset>
</html>
```

**Output :**

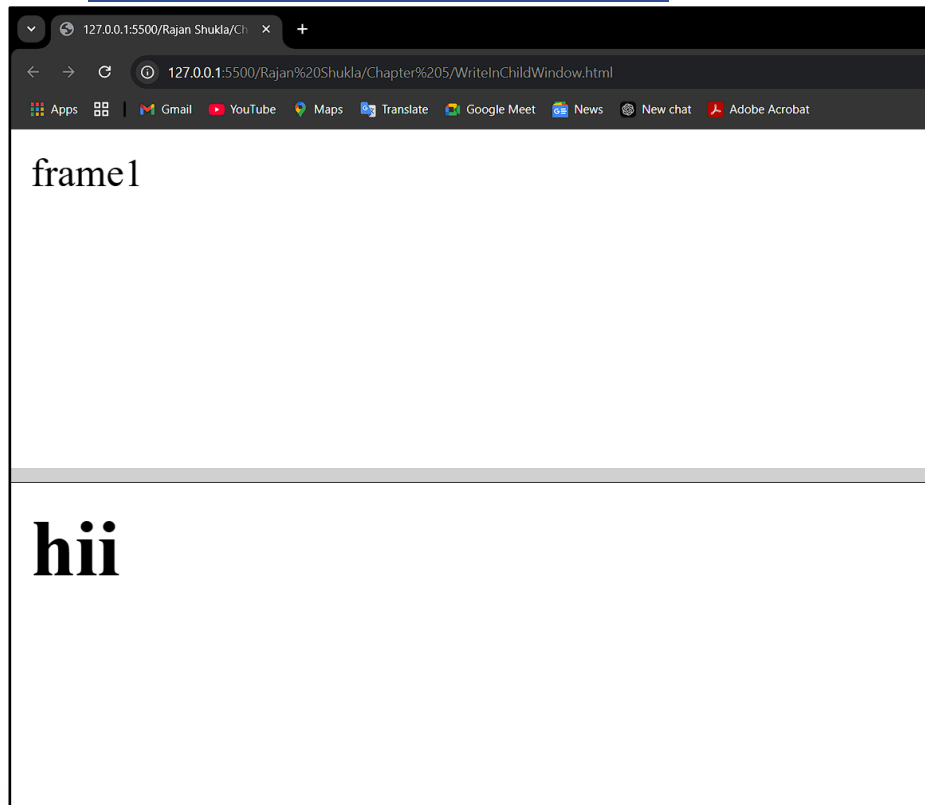

## 7. Writing in the child window

```
<html>
<head>
  <script>
    window.onload = function(){
      window.frame2.document.write("<h1>hii</h1>");
    }
  </script>
</head>
<frameset rows="50%,50%">
  <frame src="frame1.html"/>
  <frame src="" name="frame2"/>
</frameset>
</html>
```

**Output :**

## 8. Accessing an element of child window

### frame1.html

```
<html>
  <body>
    <form name="myForm">
      <input type="text" name="text">
    </form>
  </body>
</html>
```

### frame2.html

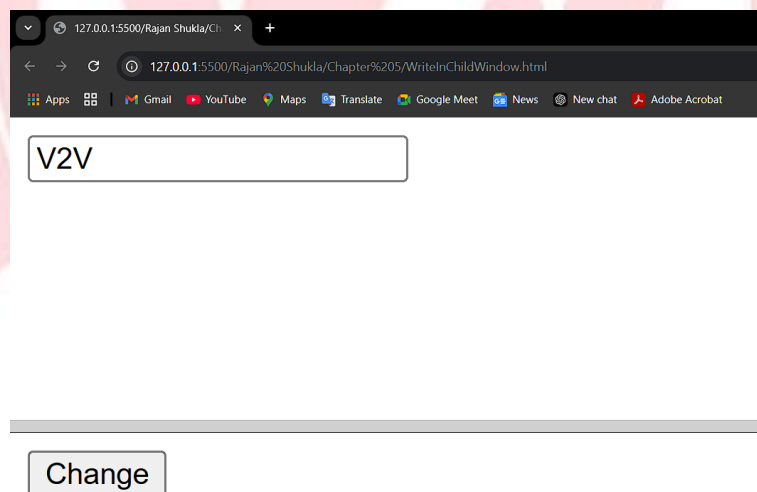

```
<html>
  <body>
    <script>
      function change(){
```

```
parent.frame1.myForm.text.value = "V2V";  
  
}  
  
</script>  
  
<button onclick="change()">Change</button>  
  
</body>  
  
</html>
```

## Frame.html

```
<html>  
  
<frameset rows="50%,50%">  
  
  <frame src="frame1.html" name="frame1"/>  
  
  <frame src="frame2.html"/>  
  
</frameset>  
  
</html>
```

## Output:

## 9. Using iframe

```
<html>  
  
<body>
```

```
<iframe width="400" height="250" src="https://www.youtube.com/embed/VubDK5nQpeY?si=BQcF9-RzEmU1Xas8"></iframe>
```

```
</body>
```

```
</html>
```

**Output :**

## 10. Rollover

```
<html>
```

```
<body>
```

```

```

```
<br><br>
```

```
<a onmouseover="javascript:img1.src='1.jpeg'">car 1</a>
```

```
<a onmouseover="javascript:img1.src='2.jpeg'">car 2</a>
```

```
<a onmouseover="javascript:img1.src='3.jpeg'">car 3</a>
```

```
</body>
```

```
</html>
```

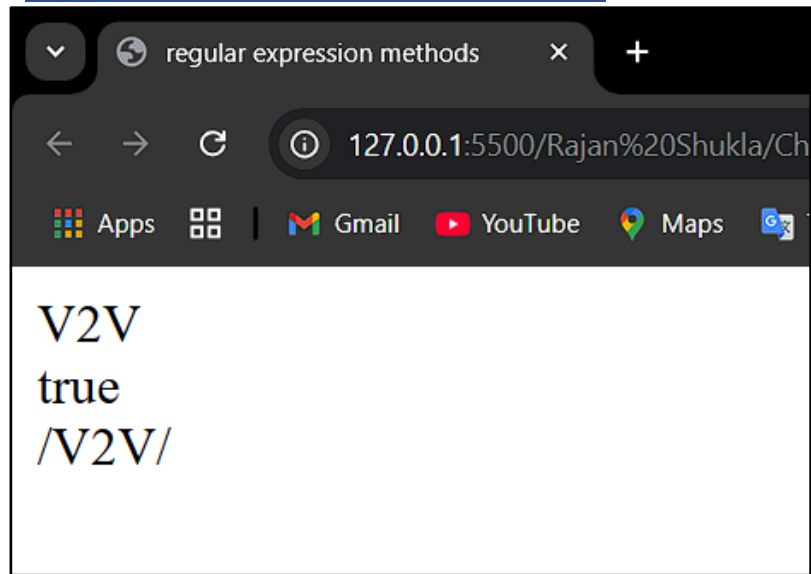

**Output :**

## 11. Regular expression methods

```
<html>
<head>
  <title>regular expression methods</title>
</head>
<body>
  <script>
    var str = "V2V is best";
    var reg = /V2V/;
    document.write(reg.exec(str));
    document.write("<br>" + reg.test(str));
    document.write("<br>" + reg.toString());
    document.write("<br>" + reg.toSource());
  </script>
</body>
</html>
```

**Output :**

## 12. Regular expression

```
<!DOCTYPE html>
